

## **Post Implementation Evaluation Report**

### **Cost-Share and Information Management System – State Conservation Commission**

Project Dates: 8/2001 through 10/2004

Project Cost: \$437,842

#### Project Objectives

The State Conservation Commission's primary goal is to efficiently and effectively implement and administer its resource conservation programs. Accountability and responsiveness to the Governor, Legislature, Kansas Water Authority, Basin Advisory Committees, and State and Federal agencies, to support policy, funding and litigation issues is becoming more demanding. The project directly supports these agency goals, by focusing on:

- Expenditure reports aimed at monitoring expenditure of State Water Plan funds to include location and fund/ project type requests;
- Using Geographic Information Systems as a resource planning and outcomes reporting tool;
- Enhancing the shared database allowing county conservation district staff to create status reports on current and encumbered year's program expenditures;
- Support program, practice, and contract data from a single, centrally managed database that contains financial, control, and reference information;
- Eliminate the duplication of data entry, error reconciliation, and error correction that exists.
